

# Lenovo ThinkSystem RAID 940 Series Internal RAID Adapters

## Product Guide

The ThinkSystem RAID 940 family of PCIe 4.0 12 Gbps SAS RAID controllers are high-performance RAID-on-chip (ROC) server adapters for connectivity to drives internal to the server. These adapters support RAID levels 0, 1, 10, 5, 50, 6 and 60, and include an extensive list of RAS and management features.

The ThinkSystem RAID 940-16i is shown in the following figure.

Figure 1. ThinkSystem RAID 940-16i Flash PCIe Gen4 12Gb Adapter

### Did you know?

The RAID 940 Series adapters all have a PCIe 4.0 host interface which doubles the bandwidth between the server and the adapter, compared to the previous generation RAID 930 adapters. This improves overall performance of the storage subsystem by supporting up to 3 million IOPS (JBOD mode) and up to 3 million IOPS in RAID (random reads).

RAID on Chip-based controllers such as the RAID 940 adapters have a dedicated processor that offloads all RAID functions from the server's CPU. With hardware acceleration for RAID 5 and 6 operations plus up to 8 GB dedicated memory for caching, the 940-8i, 16i and 32i offer the ultimate performance for ThinkSystem servers.

## Part number information

The following table provides the ordering part numbers for the adapters.

The table includes feature codes for the RAID 940 adapters to be ordered with the Tri-Mode feature enabled. Tri-Mode enables the support of SAS, SATA and NVMe drives to be connected to the adapter, as described in the [Features](#) section.

Table 1. Part numbers and feature codes

| Part number | Feature code | Tri-Mode Feature code | Description  |
|-------------|--------------|-----------------------|--|
| 4Y37A09728  | B8NY         | BGM1                  | ThinkSystem RAID 940-8i 4GB Flash PCIe Gen4 12Gb Adapter           |
| 4Y37A09729  | B8NW         | BGM0                  | ThinkSystem RAID 940-8i 8GB Flash PCIe Gen4 12Gb Adapter           |
| 4Y37A78600  | BMM1,BM35    | BM36                  | ThinkSystem RAID 940-16i 4GB Flash PCIe Gen4 12Gb Adapter          |
| 4Y37A09730  | BC4U,B8NZ    | BDY4                  | ThinkSystem RAID 940-16i 8GB Flash PCIe Gen4 12Gb Adapter          |
| 4Y37A09735  | B8P0         | BGM2                  | ThinkSystem RAID 940-16i 8GB Flash PCIe Gen4 12Gb Internal Adapter |
| 4Y37A09733  | B8P8         | None                  | ThinkSystem RAID 940-32i 8GB Flash PCIe Gen4 12Gb Adapter          |

The ThinkSystem RAID 940-8i is shown in the following figure.

Figure 2. ThinkSystem RAID 940-8i 8GB Flash PCIe Gen4 12Gb Adapter

## Technical specifications

The ThinkSystem RAID 940 Series internal RAID adapters have the following specifications:

- PCIe 4.0 x8 host interface, also compatible with a PCIe 3.0 host interface

- 12 Gbps SAS/SATA RAID controllers, based on the Broadcom MegaRAID 9560 adapter family
- 4GB or 8GB of integrated flash-backed cache
- Connectivity for up to 32 internal SAS or SATA drives:
  - RAID 940-8i supports up to eight internal SAS or SATA drives
  - RAID 940-16i supports up to 16 internal SAS or SATA drives
  - RAID 940-32i supports up to 32 internal SAS or SATA drives
- Support for intermixing SAS and SATA HDDs and SSDs. Mixing SAS and SATA drives in the same array is not supported. Mixing of HDDs and SSDs in the same array is not supported.
- Support for intermixing of 12 Gbps and 6 Gbps drives.
- Support for RAID 0, 1, 10, 5, 50, 6 and 60 standard
- Support for JBOD (non-RAID) drive state
- Support for logical drive sizes greater than 2 TB
- Configurable stripe size up to 1 MB
- Supports 512e, 512n and 4K sector formatted drives
- Supports UNMAP command for SAS SSDs (JBOD and RAID volumes)
- Supports TRIM command for SATA SSDs (JBOD)
- Compliant with Disk Data Format (DDF) configuration on disk (CoD).
- S.M.A.R.T. support.
- Configuration through
  - XClarity Provisioning Manager UEFI interface
  - XClarity Controller web interface
  - XClarity Administrator Configuration Patterns
  - StorCLI command-line interface
  - LSI Storage Authority (LSA) GUI interface
  - UEFI Human Interface Infrastructure (HII)

Note: CacheCade is not supported by these adapters

The ThinkSystem RAID 940-16i Internal adapter is shown in the following figure.

Figure 3. ThinkSystem RAID 940-16i 8GB Flash PCIe Gen4 12Gb Internal Adapter

The following table compares the specifications of the RAID 940 adapters.

Table 2. Specifications

| Feature                                | RAID 940-8i 4GB        | RAID 940-8i 8GB        | RAID 940-16i 4GB       | RAID 940-16i 8GB       | RAID 940-16i 8GB Internal | RAID 940-32i 8GB                      |

To compare the RAID 940 Series adapters to other internal adapters, see the Lenovo ThinkSystem RAID Adapter and HBA Reference

<https://lenovopress.com/lp1288-lenovo-thinksystem-raid-adapter-and-hba-reference>

## Features

The ThinkSystem RAID 940 adapters have the following standard features:

- NVMe drive support

The 8-port and 16-port adapters offer Tri-Mode (or Trimode) which enables the use of SAS, SATA and NVMe U.3 drives at the same time. NVMe drives are connected via a PCIe x1 link to the controller. Such support provides greater flexibility and allows the use of the low-latency and high-IOPS benefits of NVMe drives connected to a standard RAID adapter. Note that only NVMe drives with a U.3 interface are supported with Tri-Mode; U.2 drives are not supported.

- MegaRAID FastPath SSD performance acceleration

MegaRAID FastPath software provides high-performance I/O acceleration for SSD-based virtual drives by using a low latency I/O path to increase the maximum I/O per second (IOPS) capability of the controller. This feature boosts the performance of applications with a highly random data storage access pattern, such as transactional databases.

- MegaRAID flash cache protection

MegaRAID flash cache protection uses NAND flash memory, which is powered by a CacheVault Power Module supercapacitor, to protect data that is stored in the controller cache. This module eliminates the need for a lithium-ion battery, which is commonly used to protect DRAM cache memory on PCI RAID controllers. To avoid the possibility of data loss or corruption during a power or server failure, flash cache protection technology transfers the contents of the DRAM cache to NAND flash using power from the offload power module. After the power is restored to the RAID controller, the content of the NAND flash is transferred back to the DRAM, which is flushed to disk.

- Auto-resume on array rebuild or array reconstruction after the loss of system power

Auto-resume uses non-volatile RAM (NVRAM) to save the rebuild progress during a host reboot or power failure to automatically resume from the last checkpoint. Auto-resume ensures that data integrity is maintained throughout the process. The card supports a number of features that can be implemented without rebooting the server. Applications, such as email and web server, benefit from avoiding downtime during the transition.

- Online Capacity Expansion

Online Capacity Expansion (OCE) allows the capacity of a virtual disk to be expanded by adding new physical disks or making use of unused space on existing disks, without requiring a reboot.

- Online RAID Level Migration

Online RAID Level Migration (RLM), which is also known as logical drive migration, can migrate a virtual disk from any RAID level to any other RAID level without requiring a reboot. System availability and application functionality remain unaffected.

- Fast initialization for quick array setup

Fast initialization quickly writes zeros to the first and last sectors of the virtual drive. This feature allows you to immediately start writing data to the virtual drive while the initialization is running in the background.

- Consistency check for background data integrity

Consistency check verifies that all stripes in a virtual disk with a redundant RAID level are consistent. The consistency check mirrors data when an inconsistent stripe is detected for RAID 1 and re-creates the parity from the peer disks for RAID 5 or RAID 6. Consistency checks can be scheduled to take place periodically.

- Extensive online configuration options and advanced monitoring and event notification

Management tools provide convenience for the configuration of logical volumes and alerting when errors have occurred or are about to occur.

- Patrol read for media scanning and repairing

Patrol read is a background sentry service that pro-actively discovers and corrects media defects (bad sectors) that arise normally as a disk drive ages. The service issues a series of verify commands, and if a bad block is discovered, the card's firmware uses RAID algorithms to re-create the missing data and remap the sector to a good sector. The task is interruptible based on controller activity and host operations. The firmware also provides an interface where the patrol read task can be initiated, set up for continuous operation, and terminated from a management application. Patrol read can be activated by a manual command or automatically.

- Global and dedicated hot spare with revertible hot spare support

A hot spare rebuilds data from all virtual disks within the disk group in which it is configured. You can define a physical disk as a hot spare to replace a failed drive. Hot spares can be configured as either global or dedicated. A global hot spare allows any physical drive to be designated as a hot spare. A dedicated hot spare allows the user to assign a hot spare drive to a particular array of the same drive type.

- Drive roaming

Drive roaming occurs when the physical disks are changed to different ports on the same controller. When the drives are placed on different channels, the controller detects the RAID configuration from the configuration data on the drives.

- MegaRAID SafeStore support for self-encrypting drive (SED) services

MegaRAID SafeStore encryption services offer instant secure erase and local key management for self-encrypting drives. This technology represents a step forward in securing data on a disk drive from any unauthorized access or modification resulting from theft, loss, or repurposing of drives. Instant secure erase permanently removes data when repurposing or decommissioning SEDs. SafeStore local key management provides the necessary management and protection of SEDs by using a simple pass phrase, security key identifier, and security key file that can be set and applied to all SEDs that are assigned to a RAID adapter. This feature removes the complexity of managing each SED's unique encryption key, and it essentially relieves the administrator of most of the daily tasks of securing data.

- Hardware Secure Boot

The on-board controller incorporates advanced security through hardware secure boot. The hardware secure boot feature permits only authenticated firmware to execute on the adapter. The controller's Internal Boot ROM establishes an initial Root of Trust (RoT). Hardware secure boot authenticates and builds a Chain of Trust (CoT) with succeeding firmware images using the RoT meaning only authorized firmware is executed on the adapter. Lenovo provides the signed firmware images making the use of hardware secure boot transparent to customers, while providing confidence in the security of the solution.

- XClarity Provisioning Manager for pre-boot array configuration and management

Provisioning Manager is the ThinkSystem UEFI-based application that includes a RAID setup wizard to help you configure drive groups and virtual disks before installing or booting the operating system.

- XClarity Controller web interface for remote storage management

XClarity Controller (XCC) is the systems management processor integrated in all ThinkSystem servers. The XCC web interface allows you to perform storage inventory, create and edit virtual disks, view events, import a new controller configuration, and perform firmware updates on the adapter.

Note: MegaRAID CacheCade and MegaRAID Storage Manager are not supported.

The ThinkSystem RAID 940-32i is shown in the following figure.

Figure 4. ThinkSystem RAID 940-32i 8GB Flash PCIe Gen4 12Gb Adapter

## Server support

The following tables list the ThinkSystem servers that are compatible.

Table 3. Server support (Part 1 of 2)

| Part Number | Description  | Edge                |              | 1S Intel V2           |                        | 2S Intel V2            |                        |                        |                        | AMD                    |                     |                     |                     | Dense V2            |                 |                 | 4S V2             | 8S              |                        |                        |                     |   |

## Warranty

The adapters carry a 1-year limited warranty. When installed in a supported ThinkSystem server, the adapter assumes the server's base warranty and any warranty upgrades.

## Operating environment

The adapters are supported in the following environment:

- Operating:
  - Temperature: 10°C to 55°C (50°F to 131°F)
  - Relative humidity: 20% to 80% (non-condensing)
- Storage
  - Temperature with package: -40°C to 105°C (-40°F to 221°F)
  - Relative humidity: 5% to 95% (non-condensing)

## Agency approvals

The ThinkSystem RAID 940 adapters have the following agency approvals:

- USA (FCC 47 CFR part 15 Subpart B, class B)
- Canada (ICES -003, Class B)
- Taiwan (CNS 13438)
- Japan (VCCI V-3)
- Australia/New Zealand (AS/NZS CISPR 22)
- Korea (RRA no 2013-24 & 25)
- Europe (EN55022/EN55024)
- Safety: EN/ IEC/ UL 60950
- RoHS
- WEEE
